Reasons For Allowance

The prior art of record does not disclose or fairly suggest an apparatus and method for use with a computer assisted navigation system comprising a surgical instrument, a support structure with attachment interface to the surgical instrument and a reference element connected in a predefined position with the support structure wherein the interface to the surgical instrument comprises at least one projection and the support structure has at least one recess wherein the instrument and support structure are releasably connected in a predefined geometry wherein the projection engages the recess. U.S. Patent 6,725,080 to Melkent et al. teach an apparatus for use with a surgical navigation system for facilitating the combined positioning and orientation of multiple surgical implements wherein multiple cannulae are tracked by a surgical navigation system in real time. While Melkent et al. provide a predetermined position for the reference elements and the cannulae; the instrument within the cannula has no such position, as the instrument is movable within the cannula. Further, the instrument is not removably attached with a protrusion and recess arrangement in a predetermined position.
